A+ Rated Freezers

Appliance Information

Fridges and freezers are the hardest working appliances in the kitchen. They run 24 hours a day, seven days a week. An inefficient appliance will consume more power and will be responsible for a higher amount of carbon dioxide.

Fridges and freezers are required by EU law to display an energy efficiency label to provide consumers with a simple efficiency comparison between products. The comparison is based on a grading system with the most efficient appliances receiving A++ while the least efficient receive a G.

Since 1999 all fridges and freezers, with the exemption of chest freezers, sold in the EU must have an energy rating of C or above. Chest freezers, which are more efficient, must have an energy rating of a D or above.

All of our fridges and freezers are rated A+ or above.
